PRODUCTION OF LINEAR SAWTOOTH VOLTAGES
WITH THE BOOTSTRAP CIRCUIT. [1963] 7p (figs
formulae refs omitted)
Order from SLA \$1.10 TT-63-20699

Trans. of Elektronische Rundschau (West Germany)
1960, v. 14, no. 5, p. 181-183. (Abstract available)

DESCRIPTORS: *Circuits, Electrical engineering,
Electric potential.

A sawtooth generator is described which works on the principle of the follower charging voltage. The output voltage supplied can be divided into a raising phase and two return phases. The rising phase is investigated mathematically; it is followed by a consideration of the advantages of the circuit and the attainable linearity. The mathematical investigation is followed by a calculation. (Engineering--Electrical, TT, v. 11, no. 4) (over)

ON THE UNSTEADY MOTION OF GAS DISPLACED
BY A PISTON. [1963] 20p (figs. formulae omitted)
Arefa
Order from OTS or SLA \$1.60 63-20282

Trans. of [Akademiya Nauk SSSR, Otdelenie Tekhnicheskikh Nauk]. Izvestiya, 1955, no. 8, p. 22-36.

DESCRIPTORS: *Gas flow, *Pistons, *Detonations,
Shock waves, Equations of motion, Velocity,
Reynolds number, Pressure, Mathematical analysis.

The present paper attempts the solution of the problem involved in a strong detonation, taking into account the explosion of air by the products of the detonation. The basic assumption consists in the following: the motion of the gaseous masses is given shape by the expansion of the sphere (a spherical piston), the radius of which grows in accordance with the law $Ct^{n+1/(n+1)}$, where C and n are constants.
